ECLIPSE MICROPEN TR™ TATTOO REMOVAL

Don't Regret It... Remove It!

Now Available! All-New
Laser-Free Tattoo Removal

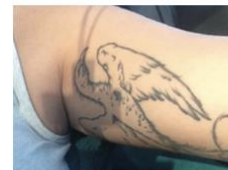

If you've been searching for safe, effective and affordable solution, ask your health care professional about the Eclipse MicroPen TR™. This innovative device utilizes the Mechanized Epidermal Tattoo Removal (METR™) technique which delivers superior results compared to many of the other tattoo removal methods. Your unwanted ink is erased using natural products and a specially trained process similar to reverse tattoo methods. The Eclipse MicroPen TR™ technology not only dissolves the tattoo ink, it is then lifted from the body naturally minimizing lymphatic exposure. After a few sessions, you will finally be free of your undesirable artwork. *

Real Patients

Upon entering the workforce, the tattoo Emilee received at 17 was no longer the image she wanted to portray. "I tried multiple laser treatments for my black tattoo and saw no results. Then, I discovered the MicroPen TR. It is amazing how it's already lifting the ink away after the first treatment. It hurts less than the laser, and I don't have the same concerns about what's happening to the ink in my body."
